

# SMART & MODULAR VERMIPONICS

## What is Wormify?

Wormify is a smart and modular vermiponics system, specifically designed for city rooftops of apartment buildings.

## How does Wormify work?

Wormify is based on a modular easily movable Keyhole Garden, taking advantage of Vermicomposting to assist in fertilizing the plants. Furthermore, the system has an application that gives you useful information about soil and worms.

## Sustainable solution

Vermicomposting helps rebuilding the soil with rich nutrients which leads to a garden that grows fresh and healthy food.
